

Keep the Pool Out of Your Locker Room

The SuitMate® Swimsuit Water Extractor's high-speed spin process removes water from wet suits to help keep facilities dry and swimmers satisfied.

Pool water damages your locker room one swimmer at a time. Wet, dripping swimsuits harm facilities by rusting metal lockers, delaminating wood finishes, and ruining carpets and furniture with mold and mildew.

And the water doesn't stop at the locker room. Most swimmers place their wet suits in a gym bag only to return home with more soaking than just their suits.

The SuitMate Swimsuit Water Extractor puts the spin on those wet suits. This invaluable locker room amenity uses an exclusive high-speed spin process to pull out water and make a wet suit drip-free in seconds. The SuitMate is safe for all fabrics and simple to use, so swimmers are glad to use it—every time they swim.

Call today to order the SuitMate Swimsuit Water Extractor for your locker room. Keep water from damaging your facilities by helping swimmers leave the pool behind.
